

Title: Nykaa Fashion Insights Dashboard

Data Analysis using Excel

Name: Sherley.G

Abstract

The Nykaa Fashion Insights Dashboard project uses Excel to analyze fashion retail sales data and identify key business trends. Using formulas, pivot tables, charts, and dashboards, the project provides insights into sales performance, customer behavior, top brands, regional trends, and revenue patterns to support data-driven decision-making.

Project Objective

- Analyze Nykaa fashion sales data
- Identify revenue-driving categories and brands
- Understand customer behavior and trends
- Generate actionable business insights

Data Source

Dataset created using Excel

Includes fields like:

- Order ID
- Product Name
- Category
- Brand
- Region
- Sales, Quantity, Rating, Payment Method

Data Cleaning

- Removed duplicate records
- Ensured no missing values
- Standardized formats (dates, numbers)
- Verified data consistency

Data Preparation (Business Logic)

Created calculated columns using formulas:

- Revenue Category (High/Low)
- Profit (assumed % margin)
- Month & Year-Month
- Rating Group (High/Low)
- Price Range (Low/High)

Data Analysis (Pivot Tables)

Built multiple pivot tables to analyze:

- Sales by Category
- Top Brands by Revenue
- Region-wise Sales
- Monthly Sales Trend
- Payment Method Distribution
- Rating vs Sales Relationship

Visualization

Created charts for better understanding:

- Bar Charts (Category, Brand, Region)
- Line Chart (Monthly Trend)
- Pie/Donut Chart (Payment Method)
- Combo Chart (Orders vs Revenue)
- Used conditional formatting for heatmap analysis

Dashboard Overview

1. Makeup Is the highly sold
2. Debit card payment dominates by 31%
3. May month generates highest revenue

Sales Analysis

Sales by brand

Sales by region

1.Sugar brand is the highest sales brand followed by mabelline

Profit and Revenue

1.Profit by brand

2.Category vs revenue

Haircare sells more but earns less compared to makeup

Customer insights

- 1.Payment method by region
- 2.Rating by category
- 3.Count of rating

- 1.High rating is given to Makeup
- 2.The count of low rating is 33% higher

Heat Map Analysis

221								
222			Red-- High Sales ---- Dominance					
223			Yellow--Low sales---- Weak Presence

Key Insights

- Certain categories drive higher revenue but lower profit
- Top brands dominate specific categories
- Regional preferences vary significantly
- Low-priced products contribute more to total revenue due to volume
- Customer ratings do not always correlate with higher sales

Thank You
NYKAA
